

Listing and Amendments to the Claims

This listing of claims will replace the claims that were published in the PCT Application:

1. (currently amended) Mounting assembly for releasably mounting a housing of an electronic device ~~(1)~~ on a surface such as a wall or a piece of furniture, comprising receiving means ~~(14—17)~~ to be arranged on said surface, and engaging means ~~(2)~~ to be arranged on the housing for engaging with said receiving means, wherein said receiving means cooperate with at least one ventilation recess ~~(4)~~ of the housing to lock said housing on the mounting assembly.

2. (currently amended) Mounting assembly according to claim 1, ~~characterised in that~~ wherein said engaging means have a first part for being moveably received in the receiving means, wherein said receiving means have a moveable part which, in a first position, cooperates with a ventilation recess of the engaging means to lock said engaging means into said receiving means, and which, in a second position, allows removal of the engaging means.

3. (currently amended) Mounting assembly according to claim 2, ~~characterised in that~~ wherein the first part of the engaging means is formed by a sliding piece.

4. (currently amended) Mounting assembly according to claim 3, ~~characterised in that~~ wherein the receiving means include guide means for slidably supporting said sliding piece.

5. (currently amended) Mounting assembly according to claim 4, ~~characterised in that~~ wherein said guide means are formed by at least one U-shaped groove adjusted to the size of the sliding piece.

6. (currently amended) Mounting assembly according to ~~any of the claims 2 to 5,~~ ~~characterised in that~~ claim 2, wherein said moveable part of the receiving means consists of a resilient bracket or lever, adapted to protrude from under the housing in locked position so as to allow a user to unlock said engaging means by pushing the protruding part.

7. (currently amended) Mounting assembly according to ~~any of the preceding claims, characterised in that~~ claim 1, wherein said assembly further comprises at least one fixing means for fixing the engaging means on the housing, said at least one fixing means having a size adapted to the size of a ventilation hole of the housing.

8. (original) Mounting assembly according to claim 7, wherein the fixing means is a screw.

9. (currently amended) Electronic device, such as a modem, ~~characterised in that it comprises~~ comprising a plurality of ventilation holes on a side of the housing, at least one of said ventilation holes being adapted to cooperate with engaging means of a mounting assembly, at least part of which is adapted to be fixed on a surface, for locking said housing on said mounting means.

10. (currently amended) Mounting assembly for an electronic device according to claim 9, ~~characterised in that~~ wherein said engaging means comprise a moveable part provided with at least one protrusion to be received in said at least one ventilation hole of the housing.

11. (currently amended) Method for fabricating a mounting assembly according to ~~any of the claims 1-8, characterised in that~~ claim 1, wherein the engaging means and the receiving means are fabricated by moulding using a single mould.
